

### Conveying system with integrated preseparation unit

The new conveying system for soft metal chips with an especially designed system of preseparation revolutionizes the discharge of aluminium from the process of machining. Due to wear-resistant materials and high-quality chains the conveyor works **failsafe** and service **reduced**. Utmost reliability **reduces costs** permanently.

### Characteristics

- for the transport of short fractional chips with a length of max. 5 cm
- pre-filtration with a filter mesh of up to 0,5 mm possible
- coolant throughput of approx. 300 l/min
- with filling-level control
- protection from destruction by electrical rotation control
- interface for compact connector plug optionally available
- height adjustable wheels optionally available

### Integrated preseparation
